Profile

Computer Engineering graduate (Trakya University) and backend-focused Full-Stack Software Engineer. Experienced in building REST APIs and backend systems based on Clean and Layered Architecture using Spring Boot, .NET Core, Go, and Node.js. Combines internship and professional experience in cross-platform mobile development with React Native and Flutter, along with hands-on backend integration.

Technical Skills

Programming Languages

Java, C# (.NET), Go (Golang), TypeScript, JavaScript, Python, Kotlin, Swift

Software Architecture & Protocols

Clean Architecture, Onion Architecture, Layered Architecture, Repository Pattern, REST API, JWT, Microservices

DevOps & Cloud Tools

Docker, Docker Compose, Kubernetes, Git, Postman, ReDoc, Railway Deployment

Backend & Frameworks:

Spring Boot, Spring Security, ASP.NET Core, Node.js

Database Management

PostgreSQL, MySQL, Entity Framework, Flyway Migrations

Mobile Development

React Native, Expo, Flutter, Jest (Unit Testing), Metro Bundler, Babel, ESLint/Prettier

Experience

Mobile Application Developer, *Extreme BS*

- Developed modern, high-performance ERP mobile applications that digitize enterprise processes using React Native and Expo.
- Designed and optimized the end-to-end backend integration and data synchronization architecture for mobile applications.

02/2026 – Present
Remote

Intern, *iQuality*

- Designed a JWT-protected CRM REST API with Spring Boot 3, building performance-oriented CRUD endpoints for customer, agent, and ticket workflows.
- Designed the PostgreSQL database schema and automated database version management with Flyway migrations.
- Containerized the application and database layers with Docker / Docker Compose, minimizing local development environment setup time.
- Published live API documentation with ReDoc, deployed to production on Railway, and created a Postman collection for integrations.

10/2025 – 11/2025

Intern, *Extreme BS*

- Developed mobile application projects integrated with existing backend services and actively used in production, using React Native and TypeScript.
- Configured Metro bundler, Babel, and ESLint/Prettier across the project infrastructure, standardizing code quality.
- Wrote unit tests with Jest, improving the application's runtime stability.

08/2025 – 09/2025

Projects

Classroom & Laboratory Management System

- Built a modular, scalable education management platform with ASP.NET Core and React.
- Designed RESTful APIs following Clean Architecture and Repository Pattern principles to improve maintainability.
- Implemented JWT-based authentication and a flexible role/permission management system.
- Developed class/course scheduling and real-time complaint and fault-tracking modules aligned with business rules.
- Designed the MySQL database schema and optimized queries to improve system response times.

Indoor Football (Futsal) Field Management System

- Built a multi-platform architecture for both web (React) and mobile (React Native) clients.
- Developed a scalable API using ASP.NET Core with Onion Architecture.
- Implemented real-time room creation, reservation status updates, and notification flows using SignalR.
- Designed the data layer with MySQL and Entity Framework.
- Developed features for user profiles, team/friend management, and review/rating functionality.

Education

B.Sc. in Computer Engineering, *Trakya University*

- GPA: 3.21 / 4.00

09/2021 – 06/2025
Edirne, Turkey

Languages

- English (C1)

- Turkish (Native)
